

# Multi-sided generalizations of the Coons patch

Péter Salvi, Tamás Várady

Budapest University of Technology and Economics

CSF Workshop on Generalized Barycentric Coordinates

Ascona, June 1–4, 2022

# Outline

Motivation

Preliminaries

Coons patch

Patches with trilateral ribbons

Generalized  $C^0$  Coons patch

Composite Ribbon patch

Patches with bilateral ribbons

Charrot–Gregory patch

Midpoint patch

Patches with unilateral ribbons

Generalized Coons patch

Midpoint Coons patch

Summary

# Motivation

# Outline

Coons patch

Patches with trilateral ribbons

Generalized  $C^0$  Coons patch

Composite Ribbon patch

Patches with bilateral ribbons

Charrot–Gregory patch

Midpoint patch

Patches with unilateral ribbons

Generalized Coons patch

Midpoint Coons patch

Summary

## $C^0$ Coons patch

$$\mathbf{S} = \mathbf{S}_1 + \mathbf{S}_2 - \mathbf{S}_{12}$$

# Outline

Motivation

Preliminaries

Coons patch

Patches with trilateral ribbons

Generalized  $C^0$  Coons patch

Composite Ribbon patch

Patches with bilateral ribbons

Charrot–Gregory patch

Midpoint patch

Patches with unilateral ribbons

Generalized Coons patch

Midpoint Coons patch

Summary

## Generalized $C^0$ Coons patch

- ▶  $\mathbf{S} = \frac{1}{2} \sum_i \mathbf{C}_i^0 B_i^0$
- ▶ Domain?
- ▶ Local parameterizations?
- ▶ Blending function?

# Parameterization based on Wachspress coordinates

- ▶ side parameter  $s_i = \lambda_i / (\lambda_{i-1} + \lambda_i)$
- ▶ distance parameter  $d_i = 1 - (\lambda_{i-1} + \lambda_i)$
- ▶  $B_i^0 = 1 - d_i$

## Example (mean curvature & contouring)

# $C^1$ Coons patch – reinterpreted with blended linear ribbons

$$\mathbf{S} = \mathbf{S}_1 + \mathbf{S}_2 - \mathbf{S}_{12}$$

# Composite Ribbon patch

$$\mathbf{s} = \frac{1}{2} \sum_i \mathbf{c}_i B_i$$

► Blending function?  
(derivative constraints)

►  $B_i = B_{i-1,i} + B_{i,i+1}$

►  $B_{i-1,i} = \frac{\prod_{k \notin \{i, i-1\}} d_k^2}{\sum_j \prod_{k \notin \{j, j-1\}} d_k^2}$

## Example (mean curvature & isophotes)

# Outline

Motivation

Preliminaries

Coons patch

Patches with trilateral ribbons

Generalized  $C^0$  Coons patch

Composite Ribbon patch

Patches with bilateral ribbons

Charrot–Gregory patch

Midpoint patch

Patches with unilateral ribbons

Generalized Coons patch

Midpoint Coons patch

Summary

# Charrot–Gregory patch

- ▶ Corner interpolant  $\approx$  partial Coons patch
- ▶  $\mathbf{S} = \sum_i \mathbf{R}_{i-1,i} B_{i-1,i}$
- ▶  $\mathbf{R}_{i-1,i} = \mathbf{R}_{i-1} + \mathbf{R}_i - \mathbf{Q}_{i-1,i}$

# Midpoint patch

- ▶ Alternative blending function:

$$B_{i-1,i}^M = \frac{d_{i-1}\alpha_0(s_i)\alpha_0(d_i) + d_i\alpha_1(s_{i-1})\alpha_0(d_{i-1})}{d_{i-1} + d_i}$$

- ▶  $\alpha_0(x) = 1 - \alpha_1(x) = 2x^3 - 3x^2 + 1$  (Hermite blends)
- ▶ Weight deficient  $\rightarrow$  extra DoF

# Outline

Motivation

Preliminaries

Coons patch

Patches with trilateral ribbons

Generalized  $C^0$  Coons patch

Composite Ribbon patch

Patches with bilateral ribbons

Charrot–Gregory patch

Midpoint patch

Patches with unilateral ribbons

Generalized Coons patch

Midpoint Coons patch

Summary

# Generalized Coons patch

$$\mathbf{S} = \sum_i \mathbf{R}_i B_i - \sum_i \mathbf{Q}_i B_{i-1,i}$$

# Constrained parameterization

- ▶  $d'_{i-1} = s_i = -d'_{i+1}$  on the  $i$ th side
- ▶  $d(u, v) \approx 1D \ G^1$  hole-filling

- ▶ Use Katō's patch

## Katō's patch

$$\mathbf{S} = \sum_i \mathbf{R}_i B_i^*$$

- Singular blending function:

$$B_i^* = \frac{\prod_{k \neq i} d_k^2}{\sum_j \prod_{k \neq j} d_k^2}$$

## Constrained parameterization – example

- Midpoint Coons patch:

$$\mathbf{S} = \sum_i \mathbf{R}_i B_i^M - \sum_i \mathbf{Q}_i B_{i-1,i}^M$$

- $B_i^M = B_{i-1,i}^M + B_{i,i+1}^M$

## Example (contouring)

# Outline
